PRODUCT DESCRIPTION & BENEFITS
SealMaster PMCTS Ultra Pavement Sealer is a premium quality coal tar emulsion pavement sealer that is hot blended with cross-linking rubber polymers and special surfactants. PMCTS Ultra is applied at 48-55% solids as opposed to standard pavement sealers that are applied at 40-43% solids. PMCTS Ultra is factory blended with aggregate providing a safe skid-resistant surface for both pedestrian and vehicle traffic. PMCTS Ultra dries faster than conventional sealers due to the higher solids content.

RECOMMENDED USES
SealMaster PMCTS Ultra is ideal for protecting and beautifying all types of pavement surfaces including parking lots, shopping malls, airports, driveways, roadways and more.

ESTIMATING MATERIAL REQUIREMENTS
One gallon of SealMaster PMCTS Ultra will cover approximately 70 - 82 square feet per gallon per coat (7.75 – 9.1 square yards per gallon per coat).

APPLICATION RATE
Apply PMCTS Ultra at a rate of 70 – 82 square feet per gallon per coat (7.75 – 9.1 square yards per gallon per coat). Application rates may vary due to pavement porosity and method of application.

PERFORMANCE CHARACTERISTICS
SealMaster PMCTS Ultra consists of hot blended polymers and factory blended aggregate.

SURFACE PREPARATIONS
Surface must be clean and free from loose material and dirt. Cracks should be filled with SealMaster Cold or Hot-Applied Crack Filling Materials. Oil stains should be cleaned and primed with SealMaster Oil Spot Primer.

APPLICATION EQUIPMENT
SealMaster PMCTS Ultra shall be applied by mechanical squeegee/brush equipment or spray equipment capable of spraying coatings with sand. Equipment shall have continuous agitation or mixing capabilities to maintain homogeneous consistency of mixed material throughout the application process. Truck mount or self-propelled squeegee/brush equipment shall have at least 2 squeegee or brush devices (one behind the other) to assure adequate distribution and penetration of SealMaster PMCTS Ultra into bituminous pavement. Hand squeegees and brushes shall be acceptable in areas where practicality prohibits the use of mechanized equipment.

MIXING PROCEDURES
Mix SealMaster PMCTS Ultra thoroughly before applying. If needed, a small amount of water may be added to facilitate application.

APPLICATION PROCEDURES
For optimum performance and durability apply a minimum of two coats of SealMaster PMCTS Ultra. A third coat may be applied to high traffic areas such as parking lot entrances, exits and drive lanes for added durability. Allow each coat to dry thoroughly before applying successive coats. Allow final coat to dry for 24 hours prior to opening to vehicle traffic.
APPLICATION WEATHER CONDITIONS
SealMaster PMCTS Ultra shall not be applied when temperature is expected to drop below 50° F during application and for a period of at least 24 hours after application. Do not apply if rain is imminent or forecast within 12 hours.

LINE STRIPING AND TRAFFIC MARKINGS
Use SealMaster Traffic Paints for line striping and traffic markings.

PACKAGING AND AVAILABILITY
SealMaster PMCTS Ultra is available for plant pick up or bulk tanker load quantities. SealMaster PMCTS Ultra is supported by a national network of SealMaster manufacturing and distribution facilities along with a national network of qualified applicators.

WARRANTY AND DISCLAIMER
The statements made on this technical data sheet are believed to be true and accurate and are intended to provide a guide for approved application practices. As workmanship, weather, construction, condition of pavement, tools utilized, and other variables affecting results are all beyond our control, the manufacturer warrants only that the material conforms to product specifications and any liability to the buyer or user of this product is limited to the replacement value of the product only. The manufacturer expressly disclaims any implied warranties of merchantability or fitness for a particular purpose.
