

WINTERIZATION

SEALMASTER BULK
STORAGE TANKS

SealMaster[®]

Pavement Products & Equipment

WINTERIZING THE TANK

- 1 Grease the packaging glands and bearings.
- 2 Flush the inside of tank completely with water. A pressure washer is recommended for this.
- 3 Pump the wash down water and sealer residue out through the pump and hose into container.
- 4 Remove plug from the bottom of storage tank and allow any remaining water to drain out into a container. Grease the threads on the plug and replace plug immediately.
- 5 Remove and clean the basket strainer.
- 6 Turn pump on, with basket strainer lid opened, and flush basket strainer with clean water. Mix up to 2 gallons of antifreeze solution and flush that through basket strainer and pump.
- 7 Remove battery, close man hole to prevent rain and snow from entering tank during winter.

CHIPPING AND CLEANING THE INSIDE OF BULK TANK

- 1 Temp. should be 32°F when chipping. Remove clean-out cover from the rear of the tank.
- 2 Use air-operated chisel with a 2-inch spade bit to remove dried sealer. **Be sure to wear proper ear protection.** Chip from top of tank down and shovel out.

WINTERIZING THE PUMP

1

Remove the rear housing of the material pump.

2

Pull out the lower pump gear and thoroughly wash with water.

3

Rinse out the pump housing.

4

Brush oil on all interior parts of the material pump including gears, housing, backplate and bolts.

5

Slide rear housing plate back onto material pump. Replace bolts but do not tighten. Be sure to leave gap between the housing plate and pump housing. This **must be done** to prevent pump from cracking during winter.

WINTERIZING THE ENGINE

1

Remove spark plug and spray W-D 40 penetrating oil into the cylinder and replace spark plug.

2

Cover and wrap the engine with plastic or canvas to protect.

WINTERIZING HYDRAULIC VALVES

1

Shift forward/reverse agitator valve into position to protect the spool valve from the weather.

2

Close the agitator speed control valve to protect the valve shaft from the weather.

DURABLE, RELIABLE EQUIPMENT ...

SealMaster has the industry's largest network of professionally trained pavement maintenance contractors to assure successful results at competitive prices. Our network of highly trained and experienced professionals are available to provide on-site project recommendations as well as full application services to assure quality results on every project.

A GLOBAL LEADER...

With over 65 Manufacturing and Distribution centers coast to coast along with manufacturing and product distribution in over 50 countries, SealMaster continues to be a global leader in pavement maintenance. SealMaster's unparalleled record of technological advances in both product and application equipment continues to set us apart as a true industry leader.

A TRADITION OF QUALITY & INNOVATION...

For over 40 years, property owners and government agencies have turned to SealMaster for innovative, cost-effective pavement maintenance solutions. SealMaster products are designed to repair, protect and beautify pavement. SealMaster continues to be an industry innovator with over one billion gallons of pavement sealer applied worldwide.
